

Introducing VisionArt Audio Solutions by Triad Speakers

[Click here for VisionArt literature](#)

The VisionArt system, designed to conceal flat panel televisions with museum-quality, fine-art prints in designer frames when not in use, now can sound as good as it looks.

VisionArt Audio Solutions by Triad Speakers allows integration of a compact, high-performance front speaker system with a VisionArt unit.

The standard speaker system integrates high-performance left, center and right speakers into the VisionArt enclosure below the television in a fully braced and sealed enclosure. When the VisionArt fine-art print is retracted to reveal the television, the speakers are masked from view with black matte to enhance viewing.

- Ideal for residential use, hotels, conference rooms, as well as other commercial applications
- Offers dynamic, high-fidelity sound without the need for other in-wall speakers or the need to rely on the less robust speakers installed on the flat-panel television itself.
- Can be used full-range in smaller venues or in-home applications or with a subwoofer and additional side speakers to create an impressive home theater experience in larger rooms.
- Available in a standardized width. Custom sizes also available.
